USER GUIDE AND COOKBOOK

EDI360

The 360° view of every EDI document

How to follow documents between your trading partners, Orderful, Workato and your ERP, and how to handle the everyday jobs of EDI support and partner onboarding.

Orderful | Workato | ERP

Provided by United Techno

CHAPTER 1

What EDI360 does

EDI360 shows every EDI document your business exchanges, from the moment it reaches Orderful to the moment it lands in your ERP, or the other way round, on one screen.

When a trading partner sends you a purchase order, it passes through several systems. Without a single view, finding out where a document is means logging into each one. EDI360 collects the activity from Orderful and Workato and presents each document as a short journey with a clear status at every step.

How a document travels

INBOUND (received from a partner)

OUTBOUND (sent to a partner)

Every document page shows these three blocks in business order. Each block has its own status.

What you can do with it

Find and follow
Search any document by PO, shipment or invoice number, Orderful transaction id, control number or Workato job id and see exactly where it stands.

Understand a failure
See which step stopped, why, and open the document in Orderful for the exact validation errors.

Stay ahead of acknowledgments
Track 997s per partner, and get reminder emails when one is overdue.

Work an issue
Raise a Jira or ServiceNow ticket from a document and follow its status without leaving EDI360.

Ask in plain language
Use the assistant to look things up, or Explain EDI to read a document in everyday words.

Onboard and test partners
Check each test document end to end, and build test files for a partner.

CHAPTER 2

Roles and what each can do

Your administrator gives you one role. It decides which screens and actions you see.

Capability	Customer admin	Support	Business	Auditor
Dashboard, documents, document detail, business details	Yes	Yes	Yes	Yes
Export documents to CSV	Yes	Yes	Yes	Yes
View partners, track a document flow, view Recipes	Yes	Yes	Yes	Yes
My View and your own email alerts	Yes	Yes	Yes	Yes
Raw EDI and Explain EDI	Yes	Yes	No	No
Refresh a document's status from Orderful	Yes	Yes	No	No
Tickets page, create a ticket, comment, change status	Yes	Yes	Yes	No
Email a document report	Yes	Yes	Yes	No
Edit partner settings and expected flows	Yes	Yes	No	No
View 997 reminder rules	Yes	Yes	No	No
Create or change 997 rules, send a reminder now	Yes	No	No	No
Edit how Workato recipes are read	Yes	No	No	No
Test file generator	Yes	Yes	No	No
Settings: members, connections, ticketing, AI model	Yes	No	No	No
AI assistant (answers to questions)	Yes	Yes	Yes	Yes
Assistant prepares tickets, reports and comments	Yes	Yes	Yes	No
Assistant prepares a 997 rule	Yes	No	No	No

In short

- **Customer admin** manages the organisation: members, connections, settings and rules. Sees everything, including raw EDI.
- **Support** investigates documents. Sees business data and raw EDI, and works tickets.
- **Business** reads dashboards and document details, and can raise tickets and email reports. Does not see raw EDI.

- **Auditor** has a read-only view of dashboards and business data.

You only see your own organisation's documents. If a menu item or button is missing, your role does not include it. Ask your administrator if you need more.

CHAPTER 3

Signing in and finding your way around

Your first sign-in

1. Your administrator adds you with your email address and a role.
2. You receive an invitation email with a link. If email is not set up, your administrator gives you the link directly.
3. Open the link, choose a password and sign in.

The top bar

The navigation runs across the top of every page. What you see depends on your role.

Item	What it is
Dashboard	Health of your documents at a glance.
Transactions	The full list of documents with search and filters.
Partners	Your trading partners, acknowledgment tracking, expected flows and 997 reminder rules.
Tickets	Tickets raised from documents, with their live status. Not shown to auditors.
Recipes	The Workato recipes that send logs to EDI360.
Test files	Test EDI file generator. Customer admins and support.
Settings	Organisation settings. Customer admins.

The assistant button sits at the bottom right of every page.

Times are shown in your organisation's time zone, which appears at the foot of the Dashboard.

CHAPTER 4

The Dashboard

The Dashboard answers one question: is everything flowing?

Choosing what you see

At the top right, choose the **environment** (test and production, production only, or test only) and the **date range**. Everything on the page follows these two choices.

Status cards

A **Total** card shows every document in the period. The twelve document statuses are grouped into five more cards:

Card	Includes
Completed	Completed, Delivered, Sent to ERP, ERP Acknowledged, Sent to Orderful
In progress	In Progress, Received, Transformed, Retrying
Warning	Warning
Failed	Failed
Unknown	Unknown

Click any card to open the Transactions list filtered to it.

Volume by day

A chart of how many documents arrived each day, so a quiet day or a spike stands out.

Needs attention

The most recent failed and warning documents. Each row shows the document type and number, the two parties, the environment (test or production), the status, how long ago it last changed, and a small strip showing which of the three blocks is affected. Click a row to open the document, or **View all** to open the full filtered list.

If your **My View** is set (Chapter 5), the Dashboard shows only the partners and document types you chose.

CHAPTER 5

Documents: search, filter and export

The Transactions page lists every document. Use the filters to narrow it down.

Search and filters

Filter	Choices and notes
Search	A PO, shipment, invoice or BOL number; an Orderful transaction id; an ISA or GS control number; a delivery id; or a Workato job id. Searching for a number looks across all dates unless you choose a period.
Status	All, Completed, In progress, Warning, Failed or Unknown.
Direction	Both, Inbound or Outbound.
Environment	Test and production, Production only, or Test only.
Type	An X12 document type such as 850 or 856.
Period	Last 24 hours (the default), 7 days, 14 days, 30 days, or All time.

Press **Search** to apply. **Clear** removes all filters. The list shows 25 documents per page and the total is shown above it.

Reading the list

Each row shows the document type and number, the partners, the environment, a status badge, a strip showing the three blocks, the **Ack** column (the 997 state, see Chapter 7) and when it last changed. Click a row to open the document.

Buttons above the list

Button	What it does
Track Document Flow	Follows one PO, shipment, invoice or BOL across a partner's documents (Chapter 8).
My View	Limits what you see to the partners and document types you choose.
Email Alerts	Emails you when a partner's document succeeds or fails (Chapter 10).
Export CSV	Downloads the current list, with your filters applied.

My View

Pick the partners you care about and, for each, the document types. The Dashboard, the list and exports then open on just those. My View only changes what you see; it does not change what you are allowed to

see. A banner above the list shows that it is on, with **Edit** and **Show everything** links. Searching for an exact number ignores My View, so you can still find any document.

Working with several documents

Tick the boxes on the left of the rows (or the box in the header to select the whole page). A bar appears with these actions:

- **Create ticket** for the selected documents, up to 25 in one ticket (Chapter 11).
- **Send Email** with a report of the selected documents (Chapter 12).
- **Export selected** to CSV.
- **Clear** to deselect.

Ticket and email actions are available to every role except auditors.

CHAPTER 6

A single document in detail

The document page tells the full story of one transaction.

The three blocks

At the top are three blocks in business order. For an inbound document: **Orderful**, then **Workato**, then **Target (ERP)**. For an outbound document: **Source (ERP)**, then **Workato**, then **Orderful**. Each block has its own status and colour, and an arrow takes the colour of the block it leaves. The first block that is red or amber is usually where to look.

What else is on the page

Section	What it shows
Failure notice	If something went wrong, which step failed and the message that was reported.
Business details	Ship from, ship to and sold to, document date, amounts, references and the first line items, read from the document itself.
Identifiers	The Orderful transaction id, control numbers, delivery id and Workato job ids, so you can quote them to a partner or to support.
Timeline	Each event in order: received, processed, sent, acknowledged.
Runs	Every time the document was processed, with its status, start time and duration. A retry in Workato appears as another run of the same document.
Tickets	Any tickets raised for this document with their latest status. Click one to open it.
Raw EDI	The X12 text of the document. Customer admins and support only.
Explain EDI	The document written in plain language (Chapter 13). Customer admins and support only.

Buttons on the page

Button	When it appears and what it does
Create ticket	Raises a Jira or ServiceNow ticket for this document.
Send email	Emails a report of this document.
Refresh from Orderful	For documents you sent. Asks Orderful now for the latest validation, delivery and 997 status instead of waiting for the next automatic check. Customer admins and support.
Open in Orderful	On a failed document. Opens it in Orderful where the exact validation errors are listed.

Outbound documents and Orderful

For a document you send, the Workato log shows what was sent but not whether Orderful accepted it. EDI360 asks Orderful itself, once a minute at first, then less often, until the outcome is final. If Orderful reports the document as invalid, the Orderful block and the document show Failed at "Orderful validation", even though the Workato recipe itself ran correctly. The Workato block stays green because the recipe did its job.

CHAPTER 7

Understanding statuses and 997s

Document statuses

Status	Meaning
Received	The document has arrived and processing is starting.
In Progress	A step is running.
Transformed	Workato has converted the document to the next format.
Retrying	A step is being tried again.
Sent to ERP	An inbound document has been handed to your ERP.
ERP Acknowledged	Your ERP confirmed it received the document.
Sent to Orderful	An outbound document was sent to Orderful and has passed validation. It is on its way to the partner.
Delivered	Orderful delivered the document.
Completed	Every expected step has finished.
Warning	The document finished but something needs a look.
Failed	A step failed, for example Orderful validation, delivery, a rejected 997, or an error in a Workato recipe.
Unknown	The status could not be worked out from the information received.

The Ack column (997 acknowledgments)

A 997 is the partner's confirmation that it received your document, or your confirmation of theirs. The **Ack** column shows only the 997 state, so it is never confused with delivery.

Shown	Meaning
Awaiting 997	Orderful has not reported a 997 for this document yet.
Accepted	The 997 came back and accepted the document.
Rejected	The 997 came back and rejected the document.
N/A	The document failed Orderful validation or could not be delivered, so no 997 is expected.

Shown	Meaning
997 not tracked	Acknowledgments are switched off for this partner. Change it on the Partners page.

Hover over a label to see the reason.

CHAPTER 8

Partners and expected EDI flows

The Partners page is where you set how each trading partner is tracked.

A partner appears here as soon as a document to or from it arrives.

Acknowledgment tracking

For each partner, choose whether to track:

- the 997 **we send** for documents we receive (inbound), and
- the 997 we **expect back** for documents we send (outbound).

Tracking drives the Ack column and the 997 reminder rules. Customer admins and support can change it.

Manage EDI Flow

An EDI flow describes the order of documents you expect with a partner, for example an 850 purchase order in, then an 855 acknowledgment, an 856 ship notice and an 810 invoice out. For each step you can set:

- the document type and direction, and its place in the sequence;
- whether one document produces several (one to many);
- whether the step is optional;
- how long after the previous step it counts as late, in minutes.

Track Document Flow

Enter a partner and a PO, shipment, invoice or BOL number. EDI360 gathers every related document, including the ship notice that quotes the PO and the invoice that quotes the shipment, and lays out each step of the flow:

Step result	Meaning
Success	The document was sent or received as expected.
Failed	The document failed.
Awaiting 997	The document is through, but the acknowledgment has not come back.
Pending	The step has not happened yet and is not yet late.
Late	The step has not happened within the time set for it.
Skipped	An optional step that did not occur.

Track Document Flow is also available from the Transactions page.

CHAPTER 9

997 reminder rules

A rule emails the right people when a 997 is overdue, so nothing waits unnoticed.

The rules sit at the bottom of the Partners page. Customer admins create and change them. Support can view them.

What a rule says

Field	Meaning
Partner	One partner, or all partners.
Document types	Chosen types, or all.
Direction	Inbound, outbound, or both (the default).
Hours	How long a 997 may stay pending before it counts as overdue, for example 24.
Recipients	Up to 10 email addresses.
When	Up to two scheduled times a day, such as morning and evening, in your organisation's time zone, or on demand only.

What counts as pending

- The document went through Orderful.
- The partner's 997 is tracked in that direction.
- Orderful has not reported the 997 as accepted or rejected.
- The document did not fail validation or delivery.

The age counts from Orderful's creation time, or from when EDI360 first saw the document. The look-back is 30 days.

Using a rule

1. Open **Partners** and scroll to the 997 reminder rules.
2. Add a rule: choose the partner, types, direction, hours, recipients and times.
3. Use **Preview** to see which documents are pending right now, without sending anything.
4. Use **Send now** to email the list to the recipients straight away.

Scheduled emails go out only when something is waiting. Each scheduled time is sent once. The email goes through your organisation's own email account, which an administrator connects in Settings.

CHAPTER 10

Email alerts

Email alerts tell you when future documents succeed or fail. They are personal to you.

1. On the Transactions page, click **Email Alerts**.
2. Choose a partner (or any partner) and a document type (or any type).
3. Choose when to be told: on success, on failure, or both. Failure covers Failed and Warning.
4. Save. Use **Send me a test email** to check that email reaches you.

- You are emailed once for each finished document that matches.
- An alert only covers documents that finish after you create it.
- You can switch an alert off, edit it or delete it at any time. Only you see your alerts.

> **Alerts or reminder rules?** An email alert is a personal subscription to future documents. A 997 reminder rule is an organisation setting that reports overdue acknowledgments to a list of people. A report email (Chapter 12) tells someone about documents that already exist.

CHAPTER 11

Tickets in Jira or ServiceNow

Raise a ticket from a document, then follow it in EDI360 or in your ticket system. Both stay in step.

Creating a ticket

1. Open a document, or tick up to 25 documents on the Transactions page.
2. Click **Create ticket**.
3. Enter the reason and choose a priority: critical, high, medium or low.
4. Confirm. EDI360 creates the ticket and fills it in from the document: partners, status, where it stopped and why, Orderful and Workato identifiers, business facts and links. Raw EDI is not included.

The ticket then shows on each document page with its status. This needs your administrator to have connected Jira or ServiceNow in Settings.

The Tickets page

Every ticket raised from EDI360 is listed with its latest status, assignee and priority, and the documents it covers. Click a ticket to open its panel:

In the panel	What it does
Comments	Comments from both EDI360 and the ticket system, in order.
Post comment	Adds a comment to the ticket. It is marked as posted from EDI360 with your name.
Change status	Jira: moves the ticket along its workflow, offering only the moves allowed right now. ServiceNow: change the status in ServiceNow.
Open in Jira or **Open in ServiceNow**	Opens the ticket in its own system.
Refresh	Reads the ticket again right now.

How fresh is the status?

EDI360 reads unfinished tickets automatically: every 5 minutes for the first day, every 30 minutes for the first week, then every 2 hours. Finished tickets are no longer checked. Opening or refreshing a ticket reads it immediately. In Settings, the ticketing card shows when the last sync ran.

Auditors do not see tickets.

CHAPTER 12

Emailing a document report

Send a clear, readable summary of documents to a colleague or a partner contact.

1. Open a document, or select documents on the Transactions page.
2. Click **Send email**.
3. Add up to 5 recipients, a subject and, if you like, a message.
4. Send. Each recipient receives one report. Replies come back to you.

What the report contains

- **A business section:** document, partners, ship from and ship to, amounts, references and line items.
- **The three-block status** for each document.
- **A technical section:** Orderful and Workato identifiers, failed steps and links.

Raw EDI is never included. The report goes out through your organisation's own email account. Every send is recorded with its recipients.

CHAPTER 13

The AI assistant and Explain EDI

The assistant

Click the chat button at the bottom right of any page and ask in everyday language. The assistant answers from your organisation's own data, and asks you a short question when it needs a detail, such as which partner or which order.

Things you can ask

- "Did we receive PO 100 from our partner?"
- "Show failed 855s from the last 3 days."
- "What are the item details and ship-to address for PO CHRP12345?"
- "Which documents are still waiting for a 997 for more than 24 hours?"
- "List our trading partners."
- "What is the status of our open tickets?"

Asking it to do something

The assistant can prepare a 997 reminder rule, a ticket, an emailed report or a ticket comment. It does not carry these out by itself. It shows a card with the details, and nothing happens until you press **Confirm**. Press **Cancel** to drop it.

Good to know	
Answers	Come from your documents, partners, 997 status and tickets. If nothing matches, it says so.
Links	Document and ticket names in an answer are links you can click.
Raw EDI	The assistant does not show raw EDI.
Conversation	It remembers the current conversation only. Closing the chat starts a fresh one.
Limits	Your administrator sets a daily message limit for the organisation. If the assistant is switched off, the button does not appear.

Explain EDI

On a document page, **Explain EDI** writes the document in plain language: who sent it, to whom, what was ordered or shipped, and anything unusual. It is available to customer admins and support, in 12 languages.

1. Open the document.
2. Choose a language and click **Explain EDI**.
3. Read the result, or print it to PDF.

The explanation is saved, so opening it again is instant. Use the refresh option if you want it written again. Explain EDI needs the raw EDI to have been converted for that document.

The assistant and Explain EDI use the same AI model, which a customer admin chooses in Settings.

CHAPTER 14

Workato recipes

EDI360 learns from the logs your Workato recipes send. The Recipes page lists every recipe that has sent one.

Workato logs every recipe in the account, but EDI360 keeps only the EDI ones. Jobs that are not EDI are counted and set aside.

The Recipes list

Column	Meaning
Recipe	The recipe name from Workato.
Jobs	How many jobs have been recorded, and how many were set aside.
Keep jobs	**Auto** (EDI360 decides), **Always keep**, or **Ignore**.
Direction	Inbound or outbound, read from the log.
Document type	For example 850, read from the log.

Changing how a recipe is read

Customer admins can change a recipe:

- Choose **Always keep** for a recipe that is one stage of an EDI flow but contains no EDI of its own, for example SAP to a staging file or queue.
- Choose **Ignore** for a recipe that should not appear.
- Set the direction or document type when the automatic reading gets it wrong.

Saving also re-reads past jobs with the new setting. Jobs that were set aside earlier under **Auto** cannot be recovered; later ones are kept.

This page only changes how EDI360 reads the logs. It never changes anything in Workato.

CHAPTER 15

Test file generator

Build correct X12 test files for a trading partner. Customer admins and support.

1. Open **Test files**.
2. **Choose the partner.** Pick a saved partner, or enter one by hand. Partner details include the ISA and GS ids on both sides, the X12 version (4010 or 5010), test or production usage, delimiters, product-id order and default parties.
3. **Choose the document:** 850, 855, 856, 810, 204, 990, 214, 210, 940, 943, 944, 945 or 997. The form follows the document's layout, and the file previews live as you type, with warnings for anything missing.
4. **Download.** The download uses the partner's next control numbers and records the file in history. A preview never uses a number. You can also type control numbers yourself.

Line items

Paste rows from Excel or a CSV, with the columns matched by their header names. Save an .xlsx workbook as CSV first.

Partner rules

Each partner can carry rules, one per line, to match its specification:

Rule	Example
Add a segment after another	`AFTER BEG: REF*DP*3`
Replace a segment	`REPLACE ITD: ITD**3***Net`
Remove a segment	`REMOVE PER`
Add a note	A line starting with `#`

Generated files have a correctly sized ISA, matching segment, group and interchange counts, and consistent hierarchy.

CHAPTER 16

Settings for administrators

Customer admins open **Settings** to manage the organisation.

Card	What you do there
Members	Add people with a role. Each person gets an invitation by email, and the link is also shown to you so you can pass it on. Change someone's role or switch them off. An organisation always keeps at least one customer admin.
Connections	Save the organisation's own accounts: Orderful (and the Orderful organisation id used for the Open in Orderful link), Workato, the email service used for alerts and reports, and the AI provider you choose. Saved values are not shown again; only the last four characters appear so you can tell which is in place.
Ticketing (Jira or ServiceNow)	Connect the ticket system: its address, a service account and token, and the Jira project key and issue type, or the ServiceNow category and assignment group. **Test connection** checks it without creating anything. The card also shows when tickets last synced, and lets you sync now.
Workato ingestion endpoint	For organisations where Workato sends logs to EDI360: the address to use, a copy button, when the last log arrived, counts for the last 24 hours, the latest failure and an example request.
API keys	Create a key for the ingestion endpoint, or for connecting an AI tool. A key is shown once when created, so copy it then. You can switch a key off.
MCP access (AI tools)	The address and ready-to-copy set-up steps for connecting an AI tool such as Claude or Gemini to read your EDI360 data. It is read-only.
AI model (assistant and Explain EDI)	Switch the assistant on or off, choose the provider and model, and set the daily message limit. Shows this organisation's usage for the last 30 days.

Adding a member

1. Open Settings and find **Members**.
2. Enter the email address, name and role. The role description appears as you choose.
3. Click add. The invitation is emailed, and the link is shown so you can also send it yourself.

CHAPTER 17

Onboarding and testing a new trading partner

The same four steps work for every new partner, and EDI360 gives you the evidence at each one.

Step	What you do	What EDI360 shows
1. Add the partner	Set the partner up in Orderful. Once its first test document arrives, it appears on the Partners page.	The partner on the Partners page, ready to be set up.
2. Set it up	Switch on 997 tracking in each direction. Define the expected flow with Manage EDI Flow.	The Ack column and flow checks follow your settings.
3. Send test documents	Send test 850s, 856s and 810s, or build test files in Test files. Filter the list to the **Test** environment.	Each test as it lands, inbound and outbound.
4. Trace each test	Open every test document and check the three blocks. Use Explain EDI to read it. Use Refresh from Orderful for documents you sent.	The exact block where a test stops, and the reason.
5. Confirm acknowledgments	Check that each document shows Accepted in the Ack column.	Awaiting 997, Accepted or Rejected for each document.
6. Go live	Switch the partner to production. Add a 997 reminder rule and an email alert for failures.	Production documents under the **Production** environment filter.

A simple test checklist per partner

Check	Done when
Inbound 850 reaches the ERP	Status Completed, all three blocks green.
Outbound 855 is valid	Orderful block green, no validation failure.
Outbound 856 is valid	Orderful block green, shipment number matches.
Outbound 810 is valid	Orderful block green, invoice number matches.
Acknowledgments return	Ack shows Accepted for each outbound document.
Track Document Flow on one PO	Every expected step shows Success.
Tickets and alerts set for production	A failure alert and a 997 reminder rule are in place.

CHAPTER 18

Cookbook: step-by-step recipes

Short, ready-to-follow recipes for the jobs that come up most often.

1. Check where a purchase order is

Roles: all | Where: Transactions

1. Open **Transactions**.
2. Type the PO number in **Search** and press Search. A number search covers all dates.
3. Open the 850. Read the three blocks and the status.
4. Use Track Document Flow to see the 855, 856 and 810 for the same PO.

2. Find out why a document failed

Roles: all (Explain EDI: customer admin, support) | Where: Document page

1. Open the failed document from **Needs attention** or the list with Status set to Failed.
2. Read the failure notice and find the first red block.
3. If Orderful failed it, click **Open in Orderful** to see the exact validation errors.
4. If you have access, use **Explain EDI** to read the document in plain words.

3. Answer a partner who says they never got a document

Roles: all | Where: Transactions

1. Search by the PO or document number.
2. Open the document and check the Orderful block, then the **Delivery** and Ack information.
3. For an outbound document, click **Refresh from Orderful** to get the latest status.
4. Use **Send email** to send the partner contact a report, or copy the details into your reply.

4. Chase missing 997s

Roles: customer admin (support can view) | Where: Partners

1. On **Partners**, confirm the partner's 997 tracking is on.
2. In the 997 reminder rules, add a rule: partner, hours (for example 24), recipients and times.
3. Click **Preview** to see what is pending right now.
4. Click **Send now** to email the list immediately, or let the schedule do it.

5. Be told when a partner's documents fail

Roles: all | Where: Transactions

1. Click **Email Alerts**.
2. Choose the partner and document type, and set the trigger to **failure**.
3. Save and use **Send me a test email**.

6. Raise a ticket for a failed document

Roles: customer admin, support, business | Where: Document page or Transactions

1. Open the document, or tick several on the list.
2. Click **Create ticket**, write the reason and choose the priority.
3. Confirm. The ticket appears on the document and on the **Tickets** page.

7. Update a ticket without opening Jira

Roles: customer admin, support, business | Where: Tickets

1. Open **Tickets** and click the ticket.
2. Read the comments, type yours and click **Post comment**.
3. For Jira, click **Change status** and choose the next step.

8. Start the day with a quick health check

Roles: all | Where: Dashboard

1. Open the **Dashboard** and look at the status cards.
2. Check **Needs attention** and open each failed or warning document.
3. Open **Tickets** to see which issues are already being worked.

9. Show only the partners you look after

Roles: all | Where: Transactions

1. Click **My View**.
2. Pick your partners and, for each, the document types.
3. Save. The Dashboard, list and exports now show only those. Click **Show everything** to clear it.

10. Send a status report to a colleague

Roles: customer admin, support, business | Where: Transactions

1. Filter the list, then tick the documents.
2. Click **Send Email**, add up to 5 recipients and a subject.
3. Send. Each person gets one report with business and technical sections.

11. Look something up with the assistant

Roles: all | Where: Chat button

1. Click the chat button.
2. Ask, for example: "What are the items and ship-to for PO 12345?"
3. Click the links in the answer to open the documents.

12. Keep a Workato stage in EDI360

Roles: customer admin | Where: Recipes

1. Open **Recipes** and find the recipe that moves a document to a staging file or queue.
2. Set **Keep jobs** to **Always keep** and save.
3. Later jobs from that recipe now appear as part of the document's journey.

13. Connect Jira or ServiceNow

Roles: customer admin | Where: Settings

1. Open **Settings** and the **Ticketing** card.
2. Choose the ticket system and enter its address, service account and token, plus the project or category details.
3. Click **Test connection**, then save.

14. Invite a new team member

Roles: customer admin | Where: Settings

1. In **Members**, enter the email, name and role.
2. Add. The invitation is emailed, and the link is shown so you can send it yourself.

15. Onboard a trading partner end to end

Roles: customer admin, support | Where: Partners, Test files, Transactions

1. Follow the six steps in Chapter 17.
2. Use Test files to build a test 850 or 856 if the partner needs a sample.
3. Filter Transactions to **Test**, trace each document and confirm the Ack column.
4. Add the 997 reminder rule and a failure alert before going to production.

CHAPTER 19

For platform administrators

United Techno platform administrators manage every organisation from one place.

Choosing an organisation

A selector in the top bar switches between organisations. All the pages in this guide then show that organisation's data.

Tenants

Create an organisation, connect its Orderful and Workato accounts, create ingestion keys, open ingestion with the readiness checks, and manage its members and settings.

API and health

Tab	What it shows
Health	Database, message queue, migrations, each organisation's queue consumer, each background worker, and the work waiting. Refreshes every 15 seconds.
Integrations (API, MCP, chat)	For the ingestion API, the MCP server, the assistant and Explain EDI: requests, failures and average time over 24 hours; traffic and keys per organisation; recent errors; the public addresses; and AI tokens and cost, with a 30-day table per organisation.
API docs (Swagger)	Every endpoint with a Try it out button. Try it out makes real requests, so use it with care.

CHAPTER 20

Reference: document types and terms

Common X12 document types

Code	Document	Main number shown
850	Purchase order	PO number
855	Purchase order acknowledgment	PO number
860	Purchase order change	PO number
865	Purchase order change acknowledgment	PO number
856	Advance ship notice	Shipment number
810	Invoice	Invoice number
997	Functional acknowledgment	Control number
204	Motor carrier load tender	Shipment number
990	Response to a load tender	Shipment number
214	Shipment status message	Shipment number
210	Freight invoice	Invoice number
940	Warehouse shipping order	Order number
943	Warehouse stock transfer shipment advice	Order number
944	Warehouse stock transfer receipt advice	Receipt number
945	Warehouse shipping advice	Order number

Terms

Term	Meaning
Inbound / Outbound	Inbound documents are received from a partner. Outbound documents are sent to a partner.
Orderful	The EDI network that exchanges documents with your partners and validates them.
Workato	The integration platform that moves and converts documents between Orderful and your ERP, using recipes.
Recipe / job	A recipe is an automated workflow in Workato. A job is one run of a recipe.

Term	Meaning
ERP	Your business system, for example SAP, that creates or receives the documents.
997	A functional acknowledgment confirming that a document was received.
ISA / GS	The envelope segments of an EDI file. Their control numbers identify an interchange or group.
Transaction	One EDI document and its journey. EDI360 uses "document" and "transaction" for the same thing.
Run	One processing of a document. A retry adds another run to the same document.
Environment	Test or production.
Tenant / organisation	One customer's separate space in EDI360.

EDI360 is provided by United Techno. For help with access or settings, contact your organisation's administrator.
